PROFILE

Final-year IT student with hands-on experience building full-stack web applications using React, Next.js, Angular, and C#.NET. Comfortable working across the stack from relational database design to responsive UI implementation. Currently completing a mentorship programme focused on professional software development practices, code review, and Agile delivery. Seeking a graduate developer role to grow into a well-rounded engineer.

EXPERIENCE

Software Developer Intern — BrightPath Digital Solutions

Johannesburg, South Africa | Jan 2026 – Present

- Built and maintained features for an internal applicant-tracking web app using Next.js (App Router) and TanStack Query for server-state management.
- Developed reusable React components and collaborated with a senior mentor on code reviews, improving PR turnaround time within the team.
- Contributed to REST API endpoints in C#.NET, including validation logic and unit tests using xUnit.

Freelance Web Developer

Remote | Jun 2025 – Dec 2025

- Delivered three static marketing sites for small businesses using Angular and deployed them on Render.com with SPA routing configuration.
- Advised clients on basic SEO structure, page performance, and mobile responsiveness.

EDUCATION

Diploma in Information Technology (Software Development)

Belgium Campus iTversity | 2024 – 2026 (Expected)

- Core modules: Object-Oriented Programming (C#), Web Application Development, Databases, Software Engineering Practice, Networks.
- Currently completing a formally assessed mentorship module.

SKILLS

Languages	C#, JavaScript/TypeScript, SQL, HTML/CSS
Frameworks	Next.js, React, Angular, .NET / ASP.NET Core
Tools	Git/GitHub, TanStack Query, Render.com, Postman, VS Code
Databases	SQL Server, PostgreSQL
Practices	Agile/Scrum basics, code review, unit testing

PROJECTS

Applicant Review Dashboard (Personal Project)

- Next.js App Router application with a dashboard, profile settings, applicant list with dynamic routes, and review history, backed by an authenticated REST API.

Elevator Simulation (Coursework)

- C# console application modelling elevator state and passenger capacity using an abstract base class and asynchronous movement simulation.
