Professional Summary

Highly motivated and technically proficient Computer Science graduate from Imperial College London. Proven track record in full-stack development, cloud architecture, and machine learning, highlighted by an internship at AWS on the Serverless team. Experienced in designing scalable backend systems and robust frontend user interfaces.

Education

Imperial College London

Graduated 2026

BSc Computer Science — First Class Honours

Technical Skills

Python, JavaScript, TypeScript, Java, C++, React, Node.js, Next.js, AWS (Lambda, DynamoDB, S3, Cognito), Docker, Git, CI/CD, PostgreSQL, TensorFlow, Keras

Work Experience

Software Engineering Intern

June 2025 - September 2025

Amazon Web Services (AWS) - Serverless Team

- Designed and developed a microservice using AWS Lambda and API Gateway, optimizing execution latency by 15%.
- Implemented real-time telemetry streaming pipelines using Amazon Kinesis and DynamoDB Streams.
- Collaborated in an agile scrum team, participating in sprint planning, code reviews, and daily standups.

Personal Projects

Real-Time Collaborative Chat Architecture

Technologies: React, Node.js, Socket.io, Redis, PostgreSQL

Built a scalable chat application supporting thousands of concurrent rooms, using Redis Pub/Sub for horizontal scaling and multi-node synchronization.

Machine Learning Stock Predictor

Technologies: Python, TensorFlow, LSTM, Pandas, Alpaca API

Developed a recurrent neural network using LSTM layers to forecast equity price movements with an 72% directional accuracy rate.

Interests & Hobbies

Competitive programming, open-source contribution, hiking, and chess.
