Professional Summary

Deeply technical MSc Artificial Intelligence graduate with an extensive background in state-of-the-art machine learning models, specifically in Natural Language Processing and Computer Vision. Experienced in bleeding-edge AI research environments through an elite placement at Google DeepMind.

Education

University College London (UCL)

Graduated 2026

MSc Artificial Intelligence — Distinction

Technical Skills

Python, C++, R, PyTorch, TensorFlow, Hugging Face, OpenCV, NumPy, Scikit-Learn, AWS, Docker, Git, LaTeX, Linux Core

Work Experience

Data Scientist Intern

June 2025 - September 2025

Google DeepMind

- Evaluated transformer-based language architectures on large-scale domain-specific text evaluation metrics.
- Optimized tokenization pipelines, leading to a noticeable increase in batch inference processing efficiency.
- Co-authored internal technical review reports on reinforcement learning safety guidelines.

Machine Learning Research Assistant

September 2024 - May 2025

UCL Center for Artificial Intelligence

- Assisted faculty researchers in preparing multi-modal spatial image datasets for vision-language models.
- Configured high-performance computing (HPC) GPU clusters to parallelize extensive deep training workflows.

Personal Projects

Biomedical Named Entity Recognition (NER)

Technologies: PyTorch, Hugging Face Transformers, BERT, Docker

Fine-tuned a domain-specific BioBERT model to extract complex medical conditions and pharmaceutical naming schemas from unstructured scientific literature.

Autonomous Object Tracking & Segmentation

Technologies: Python, OpenCV, YOLOv8, PyTorch

Built an end-to-end multi-object spatial tracking system that segments vehicle and pedestrian motions in real-time city surveillance video feeds.

Interests & Hobbies

Violin performance, scientific illustration, and algorithmic generative digital art.
