PROFESSIONAL SUMMARY

An ambitious and detail-oriented Computer Science honors graduate with a strong foundation in full-stack software development, object-oriented programming, and cloud technologies. Proven ability to design, build, and deploy robust web and mobile applications through rigorous academic projects and practical internship experience. Adept at collaborative problem-solving within agile team environments, writing clean, maintainable code, and quickly mastering emerging technologies. Seeking an impactful Graduate Developer role to contribute high-quality technical solutions while advancing core software engineering expertise.

TECHNICAL EXPERTISE

Languages	Java, Python, JavaScript, TypeScript, C++, SQL, HTML5, CSS3
Frameworks & Tools	React.js, Node.js, Express, Spring Boot, Django, Git, Docker
Databases & Cloud	PostgreSQL, MongoDB, MySQL, AWS (S3, EC2), Firebase
Methodologies	Agile/Scrum, Test-Driven Development (TDD), RESTful API Design, CI/CD

EDUCATION

BSc (Hons) in Computer Science

University of London

Sept 2022 – June 2025

First Class Honors

- Key Modules:** Advanced Data Structures & Algorithms, Software Engineering Architecture, Database Management Systems, Web Development, Artificial Intelligence.
- Academic Achievement:** Received the Departmental Excellence Award for achieving top 5% marks in the Software Architecture cohort.

TECHNICAL PROJECTS

Full-Stack E-Commerce Ecosystem (CapStone Project)

Sept 2024 – May 2025

Technologies: React, Node.js, Express, MongoDB, Redux, Stripe API

- Architected and implemented a responsive, end-to-end e-commerce web platform serving over 500 simulated active users.
- Designed secure user authentication using JSON Web Tokens (JWT) and integrated the Stripe API gateway for seamless payment processing.
- Built a dynamic product inventory dashboard with optimized MongoDB pagination and text-search queries, reducing server response times by 35%.

Automated Task Management Mobile Application

Feb 2024 – May 2024

Technologies: React Native, Firebase Auth, Firestore, Cloud Functions

- Developed a cross-platform mobile task productivity tracking application utilizing Agile project sprints.
- Implemented real-time data synchronization and localized caching strategies using Firebase Firestore, ensuring offline usability.
- Leveraged Firebase Cloud Functions to execute automated push notifications for upcoming deadlines, boosting user retention metrics in tests.

Algorithmic Trading Backtesting Engine

Oct 2023 – Jan 2024

Technologies: Python, Pandas, NumPy, Matplotlib

- Engineered a modular backtesting framework to simulate historical stock trading strategies against market datasets.
- Utilized Pandas and NumPy for complex matrix operations to evaluate portfolio metrics like Sharpe Ratio and Maximum Drawdown.
- Optimized historical data parsing logic, cutting computation times down by 50% for high-volume historical CSV datasets.

PROFESSIONAL EXPERIENCE

Software Engineering Intern

June 2024 – Aug 2024

Nexus Tech Solutions

London, UK

- Collaborated in a cross-functional Scrum team of 6 engineers to refactor a legacy customer dashboard into an interactive React dashboard.
- Authored comprehensive automated unit tests using Jest and Enzyme, which elevated overall codebase test coverage from 68% to 84%.
- Identified and corrected critical performance bottlenecks within internal RESTful APIs, reducing page rendering latency by 1.2 seconds.
- Participated actively in daily stand-ups, technical sprint grooming sessions, and peer-led code reviews to align with production quality standards.

Peer Computer Science Tutor

Sept 2023 – May 2024

University of London

London, UK

- Delivered weekly individual and group instruction to over 30 first-year students in core Object-Oriented Programming (Java) and discrete mathematics.
- Deconstructed highly technical concepts into accessible, digestible programming principles, helping 90% of regular tutees improve by at least one letter grade.

LEADERSHIP & EXTRACURRICULAR ACTIVITIES

Hackathon Finalist / Core Team Member

Oct 2024

HackLondon Annual University Hackathon

- Worked intensely with a 4-person developer group over a 36-hour period to build a smart municipal recycling web application using Google Maps API.
- Placed in the Top 10 out of over 80 participating regional teams based on execution, design, and pitch quality.

Active Member

Sept 2022 – Present

University Computer Science & Robotics Society

- Engaged in bi-weekly technical workshops, dynamic coding challenges, and professional networking events featuring guest industry tech leads.
