Associate Software Developer/Engineer (DevOps)

I am an Associate Engineer at Nagarro specializing in DevOps and Java. I hold a certificate in Systems Development, and I am in my final year for a B.Sc. in Informatics at Unisa. My aspirations lie in the field of development and operations, learning how to improve and make the software development life cycle better.

EDUCATION & CERTIFICATIONS

Tertiary Qualifications

B.Sc. in Informatics – University of South Africa – 2023-2025

National Certificate: Information Technology (Systems Development) – WeThinkCode_ – 2022-2023

Certifications

Kubernetes and Cloud Native Associate Certificate - 2025

TOOLS & TECHNOLOGIES

- Programming Languages: Java, C#, Python, C++
- Frameworks: Spring boot, Dotnet, Qt, Flutter
- Azure DevOps, Jenkins, Docker, Kubernetes, OpenShift, Terraform, Helm charts, Ansible
- Drawio, Confluence

AWARDS & HONORS

- Top student in matric
- Hackathon Participant at GK Kulcha hackathon
- League and Cup winner with my Madibaz football club
- Fire fighter cadet at the Florida BESAFE Center

PROFESSIONAL EXPERIENCE

Nagarro (Pty) Ltd | Johannesburg

January 2025 – Present

(Biz DevOps Engineer – Contracted to Nedbank)

This is a multidisciplinary role which consists of enabling developers to deploy code securely and efficiently to production by creating automated pipelines.

Nedbank Core Banking: Replacing legacy core banking systems,

- Implemented a secrets management system on the OpenShift cluster using Azure DevOps CI/CD pipeline
- Helping the team of Java developers to create a local environment using Docker Desktop
- Addressing code smells from SonarQube by reducing code complexity by refactoring the code and also increasing code coverage to at least eighty percent.
- Created documentation from the data models given by the software leads into digestible formats.
- Supplementing design models from the senior leads with more detailed sequence diagrams, class diagrams etc. on Confluence using Drawio as the drawing tool

Nagarro (Pty) Ltd | Johannesburg

April 2024 – December 2024

DevOps Trainee

Training in the field of DevOps to create automated pipelines and deploy and deliver code effectively.

Exit Assessment: Deploy a distributed system on Azure Kubernetes Service,

- Created a distributed event driven system for a small e-commerce site. Using C-Sharp, .Net and PostgreSQL, as the

backend and JavaScript and the React framework for the frontend.

- Deploying both back-end and front-end (React, JavaScript) on Azure using the Azure Kubernetes Service.
- For the repository I used Azure Repos and for the deployment of the Kubernetes cluster, I used Helm charts and Terraform.
- For containerization I used Docker and stored my images on Azure Container Registries (ACR). • And for vulnerability Management I used SonarQube, (running locally)
