Professional Summary

Exceptional, product-minded full-stack software engineer with elite internship experience across multiple highly respected fintech and media corporations. Active maintainer of notable open-source React infrastructure. Passionate about engineering high-throughput distributed applications.

Education

University of Edinburgh

Graduated 2026

BSc (Hons) Computer Science — First Class Honours

Technical Skills

JavaScript, TypeScript, Go, Rust, React, Next.js, Node.js, WebSockets, PostgreSQL, Redis, Docker, Kubernetes, AWS, GraphQL

Work Experience

Software Engineering Intern

June 2025 - September 2025

Monzo Bank

- Owned the containerized deployment of a microservice built in Go for banking ledger verification pipelines.
- Refactored backend validation structures to reliably handle thousands of real-time transactions per second.
- Collaborated on strict security audits adhering to fintech security compliance mandates.

Software Engineering Intern

June 2024 - September 2024

Sky

- Developed high-fidelity custom internal video asset management interfaces using Next.js and GraphQL.
- Improved continuous integration pipeline runtimes by caching multi-stage Docker build layers.

Personal Projects

react-snap-forms (Open Source Library)

Technologies: TypeScript, React, Rollup, Jest

Creator and core maintainer of a zero-dependency high-performance form state validation library, achieving over 8,000 weekly active downloads on npm.

Real-Time Collaborative Digital Whiteboard

Technologies: Go, WebSockets, React, HTML5 Canvas, Redis

Engineered an ultra-low-latency vector workspace that syncs brushstrokes, layers, and user vectors instantly across client sessions via a Go-based WebSocket hub.

Interests & Hobbies

Bouldering, playing acoustic guitar, and contributing to open-source software.
